Figure 1 consists of 12 diagrams illustrating the stages of chick embryo development. The diagrams are arranged in two rows of six. The top row shows the embryo at 1, 2, 3, 4, 5, and 6 days. The bottom row shows the embryo at 7, 8, 9, 10, 11, and 12 days. Each diagram is labeled with its corresponding day and shows the progression of the embryo's growth and development, including the formation of the yolk sac, the embryo itself, and the surrounding membranes.

Figure 1 consists of 12 histograms arranged in a single row, labeled x_1 through x_{12} from left to right. Each histogram shows the frequency of values for x_k ranging from 0 to 10. The distributions are roughly bell-shaped and centered around 5. The peak frequency (count) increases from 10 for x_1 to 12 for x_{12} .

Figure 1 consists of 12 micrographs arranged in two rows of six. The top row shows stages 1 through 6, and the bottom row shows stages 7 through 12. Each micrograph is labeled with a number and a time point in hours and minutes. The images illustrate the development of the chick embryo eye, showing the progression from a small, undifferentiated spot to a fully formed, pigmented structure.
